

INDUSTRY TREND ANALYSIS

Commercial propositions localize while networks stay global

Structural · Evidence current to 27 August 2026

The signal

Winning products, pricing, partnerships, and channels adapt locally even as platforms, technology, and supply networks remain globally connected.

1.9% then 2.6%

WTO baseline forecast for merchandise-trade volume growth in 2026 and 2027. ^[1]

\$400 billion

increase in India's external trade over ten years predicted in an early-2024 BCG analysis cited by the Brief archive. ^[2]

14%

share of India's overall exports represented by the cited US trade exposure, despite a larger bilateral headline. ^[3]

What is changing - and why it matters

Commercial propositions are localizing even while technology, platforms and supply networks remain globally connected. Winning requires local price points, channels, partners and cultural relevance, but the answer is not to duplicate every capability market by market. The operating model must combine common platforms with genuinely local choices.

Executive implication

Commercial propositions are localizing even while technology, platforms and supply networks remain globally connected. Winning requires local price points, channels, partners and cultural relevance, but the answer is not to duplicate every capability market by market. The operating model must combine common platforms with genuinely local choices.

Action agenda

- Define which proposition and channel decisions must be local.
- Keep shared data, technology and supply capabilities global where scale matters.
- Use modular products and partnerships to limit localization complexity.

What could change the view

- Local variants multiply faster than revenue and margin.
- Trade barriers or data rules reduce the value of shared platforms.
