

MEGATREND ANALYSIS

Growth rebalances toward large, local, youthful markets

Structural · Evidence current to 27 August 2026

The signal

India, Indonesia, and Africa emerge as growth platforms while Europe is framed through weak demand, competitiveness, and capital-mobilization constraints.

\$7 trillion

size the Brief archive says India's economy could reach by 2030 at then-current growth rates. ^[1]

**377 million /
\$860 billion**

India's Gen Z population and estimated annual spending cited in the archive. ^[1]

>1/3

share of the world's people aged 15-24 expected to live in Africa by 2050; 600 million Africans still lacked electricity in the cited Brief. ^[2]

What is changing - and why it matters

Growth is becoming more geographically differentiated. India, Indonesia and parts of Africa combine scale, younger populations, digital adoption and infrastructure needs, while Europe is framed through weaker demand, risk aversion and an investment gap. The conclusion is not a simple transfer of growth from West to East or South. It is that country-specific economics, regulation, talent and customer behavior matter more. Global platforms remain useful, but the value proposition, partnerships, supply network and capital intensity must be localized.

Executive implication

A uniform global playbook misses divergent demand, talent, trade, and regulatory realities.

Action agenda

- Treat geography as an active capital-allocation choice with explicit return, resilience and capability criteria.
- Localize the customer proposition, route to market, partnerships and talent model rather than only translating products.
- Sequence commitments through scalable options and milestones instead of assuming one national growth forecast will materialize uniformly.

What could change the view

- National growth translates poorly into accessible profit pools because of affordability, infrastructure or execution gaps.
- Local requirements fragment the operating model faster than scale benefits can offset complexity.
