

# Capital allocation becomes continuous and dynamic

Structural | Evidence current to 2026-09-02 | High on the need for active re-underwriting; medium on optimal rotation speed

## 1. The CEO Verdict

Continuous portfolio re-underwriting is an ownership capability. <sup>[1][2][3]</sup>

Strong franchises can deteriorate quickly when technology, policy or customers move, so capital must follow current advantage rather than historical confidence.

## 2. Why Now

2022-23

**Walled fortresses are challenged**

Technology and customer shifts expose apparently secure businesses. <sup>[3]</sup>

>

2024-25

**Planning becomes continuous**

Scenario-based allocation replaces annual certainty. <sup>[4]</sup>

>

2026

**Capacity bets face proof**

Manufacturing and infrastructure capital require utilization and operating milestones. <sup>[2][1][5]</sup>

Figure 1. The evidence path to the present inflection

The sequence summarizes the archive and does not imply uniform adoption across markets or companies.

### 3. Value at Stake

|                                                                                                                                                                       |                                                                                                                                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <div>REPORTED ACTUAL</div> <div>\$206bn</div> <div>capital committed to infrastructure funds in 2025, described in the archive as a record year. <sup>[1]</sup></div> | <div>MODELLED ESTIMATE</div> <div>~\$1T</div> <div>manufacturing value described as at risk of relocation out of Western Europe. <sup>[2]</sup></div>                       |
| <div>MODELLED ESTIMATE</div> <div>\$440bn</div> <div>additional manufacturing value described as at risk of relocation in the US. <sup>[2]</sup></div>                | <div>REPORTED ACTUAL</div> <div>3-5 years</div> <div>forward value-creation horizon proposed in the Brief for testing the strength of core businesses. <sup>[3]</sup></div> |

Each anchor was checked against the cited passage; the measurement type is shown above the value.

Portfolio economics should compare free cash flow, reinvestment need, disruption exposure and option value on one basis. Narrative conviction is not a substitute for contracted demand or operating milestones. <sup>[4][2][3]</sup>

### 4. How the Game Changes

|    |                                                                                                                                                    |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------|
| 01 | <div>Customer value moves before accounting</div> <div>Franchise erosion often appears first in behavior and technology. <sup>[3]</sup></div>      |
| 02 | <div>Staging protects downside</div> <div>Milestone capital preserves options under uncertainty. <sup>[4]</sup></div>                              |
| 03 | <div>Operating capability determines utilization</div> <div>Assets require talent, demand and infrastructure to earn returns. <sup>[2]</sup></div> |

## 5. Your Exposure & Strategic Choices

### Where exposure concentrates

|            |                                                               |
|------------|---------------------------------------------------------------|
| Owners     | Challenge protected assets with comparable return thresholds. |
| Management | Link strategy refresh to capital and capacity decisions.      |
| Boards     | Make exit and reinvestment triggers explicit.                 |

Figure 3. Where the trend enters the enterprise system

### Choices that cannot be delegated

|                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                          |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>CEO CHOICE · ATLAS JUDGMENT</b><br><b>Defend the fortress or fund the option</b><br>How much capital should protect the core versus test disruptive adjacencies?<br>Trade-off: Core investment preserves cash flow; options create future relevance but can dilute focus. | <b>CEO CHOICE · ATLAS JUDGMENT</b><br><b>Commit early or stage proof</b><br>Which assets require early control, and which should earn capital through milestones?<br>Trade-off: Early commitment secures scarcity; staging protects downside but can surrender position. |

## 6. CEO Agenda & Signposts

### Action sequence

|                                                                                                                            |                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| <b>01 NEXT 90 DAYS</b><br><b>Re-underwrite the core</b><br>Review strongest assets through customer and technology lenses. | <b>02 NEXT 90 DAYS</b><br><b>Define capital gates</b><br>Tie commitments to utilization and cash milestones. |
| <b>03 6-12 MONTHS</b><br><b>Build option inventory</b><br>Prepare partners, exits and adjacency moves.                     |                                                                                                              |

Figure 4. The management response in sequence

### Leading indicators

|           |                                   |
|-----------|-----------------------------------|
| <b>01</b> | Cash conversion by asset          |
| <b>02</b> | Reinvestment intensity            |
| <b>03</b> | Customer-value leading indicators |
| <b>04</b> | Capital released and redeployed   |

### What would change our view

- Frequent reallocation can destroy long-term capability.
- Early exits can crystallize cyclical lows.
- Milestones can become bureaucratic rather than decision-relevant.

### Evidence boundary

High on the need for active re-underwriting; medium on optimal rotation speed  
The examples demonstrate mechanisms, not a universal return premium for more frequent portfolio rotation.
