

Public-private delivery capacity becomes the execution bottleneck

Scaling | Evidence current to 2026-09-02 | Medium-high on the delivery constraint; project outcomes remain jurisdiction-specific

1. The CEO Verdict

Public-private delivery capacity is becoming the bottleneck between ambition and outcomes. ^{[1][2]}

Policy must create investable projects, clear accountability and measurable operating capacity.

2. Why Now

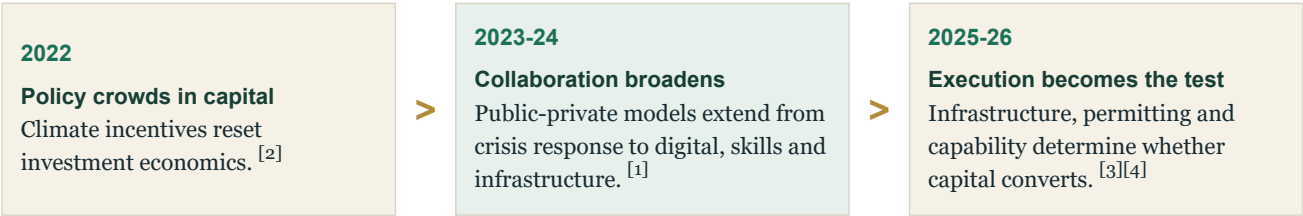

Figure 1. The evidence path to the present inflection
The sequence summarizes the archive and does not imply uniform adoption across markets or companies.

3. Value at Stake

MODELLED ESTIMATE \$2T modelled ASEAN digital opportunity by 2030 cited in the Brief, conditional on a bold public-private agenda. ^[1]	MODELLED ESTIMATE >\$1T estimated combined climate-related investment that the US Inflation Reduction Act could unlock. ^[2]
REPORTED ACTUAL ~\$370bn climate and energy funding directed by the US Inflation Reduction Act as described in the Brief. ^[2]	REPORTED ACTUAL 100% foreign ownership permitted for renewable assets after cited amendments in the Philippines. ^[1]

Each anchor was checked against the cited passage; the measurement type is shown above the value.

Value should be tracked from public commitment through private capital crowded in, permitted capacity, connected assets and realized output. Announcement value without delivery conversion creates false confidence. ^{[3][2][1][4]}

4. How the Game Changes

01	Policy changes project economics Incentives and rules can make technologies financeable. ^[2]
02	Coordination reduces bottlenecks Shared milestones align agencies, investors and operators. ^[1]
03	Delivery capability constrains scale Skills, equipment and infrastructure can bind after funding is announced. ^{[4][3]}

5. Your Exposure & Strategic Choices

Where exposure concentrates

Policymakers	Design for delivery capacity and transparent accountability.
Companies	Bring operating evidence and investable projects.
Investors	Price policy durability and execution dependencies separately.

Figure 3. Where the trend enters the enterprise system

Choices that cannot be delegated

CEO CHOICE · ATLAS JUDGMENT Announce ambition or gate delivery Should policy maximize headline commitments or release support against deployable milestones? Trade-off: Ambition mobilizes attention; gates protect credibility but may slow early participation.	CEO CHOICE · ATLAS JUDGMENT Public control or private execution Which risks and decisions should government retain, transfer or share? Trade-off: Public control protects objectives; private execution adds speed and capability but requires enforceable accountability.
---	--

6. CEO Agenda & Signposts

Action sequence

01 NEXT 90 DAYS Define the delivery chain Map approvals, capital, equipment, talent and operators.	02 NEXT 90 DAYS Set conversion metrics Measure time to permit, connect and operate.
03 6-12 MONTHS Institutionalize joint governance Create milestone-based public-private forums.	

Figure 4. The management response in sequence

Leading indicators

01	Private capital crowded in
02	Time to permit and connect
03	Operational capacity delivered
04	Milestone slippage

What would change our view

- Public incentives can crowd out private discipline.
- Coordination can slow decisions if accountability is diffuse.
- Political transitions can alter commitments.

Evidence boundary

Medium-high on the delivery constraint; project outcomes remain jurisdiction-specific
Modelled opportunity values are conditional and are not realized fiscal or economic outcomes.
